

protectaridge

Bad Weather Forecasted

'Below freezing tonight with snow or rain later.'

'Should I stop now and loose another day or take a chance and try and protect it?'

'Spoiled work cost me two whole days last week.'

There is a Solution!

A tough durable solution, helping to protect new mortar on recently bedded ridges and hips from **FROST, SNOW** and **RAIN!**

Quickly laid over hips and ridges

Laps secured by tough Velcro

Special junction piece for mitred ridges

**Keep a
protectaridge
kit in the van for whenever
you may need it.**

protectaridge

protectaridge comes in individual 2m lengths. Made from a durable 400gm Polyester Laminated Waterproof fabric.

To provide ballast each length of protectaridge has socks sown in along the length and they are filled with evenly weighted kiln dried sand.

Reinforced eyelets enable tying down when the wind is expected to be extreme.

A special weighted junction piece is available to protect the mitred ridges.

KIT ONLY £195

PLUS VAT

The kit comes in a Strong strapped handled bag containing five 2m lengths.

Additional 2m lengths can be supplied separately, as can the Junction piece.

It is the contractors responsibility to consider protectaridge's suitability in extreme weather conditions.
